

**ABSTRACT OF THE INVENTION**

A method and system for transferring images from an imaging source device to a destination is provided herein. The invention includes a novel image helper program that transfers images from the imaging source device to the destination with minimal intervention on the part of the user. The image helper program gives the user the impression that the images are being transferred from the imaging source device directly to the destination. In one implementation, the user is given the opportunity to select from several possible destinations.
